EDUCATION

Superior University

Expected Graduation: 2027
Bachelor of Science in Software Engineering (In Progress)
CGPA = 3.7

CERTIFICATIONS

- Build a Website with WordPress
- Business Analysis & Process Management
- Google SEO Fundamentals
- Getting Started with Excel
- AI for Everyone
- Introduction to Psychology
- In Progress: Web Development, Vibe Coding, Prompt Engineering, Generative AI

TECHNICAL SKILLS

- **Programming**
 - JavaScript (ES6+), Dart, C++, SQL
 - React.js, Node.js, Express.js
 - Flutter (UI widgets, navigation, emulator debugging)
 - C++, Python, Java, JavaScript, OOP, DSA, debugging, algorithm analysis
- **Web Development**
 - HTML5, CSS3, JavaScript, React.js, Next.js

PROFILE

Software Engineering student with hands-on experience in full-stack web and mobile application development. Skilled in Flutter, React, Supabase, SQL, and object-oriented programming using C++, Python, and JavaScript. Experienced in UI/UX prototyping and building responsive interfaces with HTML, CSS, and modern frontend frameworks. Strong foundation in system design, SDLC documentation, and scalable architecture. Passionate about developing structured, user-focused applications with clean UI and efficient backend integration.

EXPERIENCE

10Pearls (10P Shine) – Software Engineering Intern

- Remote | 2026
- Developed a full-stack journaling platform using React, Node.js, Express, and PostgreSQL.
- Implemented secure authentication with JWT, bcrypt, and Google OAuth 2.0.
- Built rich-text note editing, speech-to-text journaling, notebook organization, tagging, pinning, and archive systems.
- Designed responsive UI with custom CSS architecture, theme switching, and Framer Motion animations.
- Created RESTful APIs and tested endpoints using Postman.
- Improved code quality through Jest, Supertest, React Testing Library, and SonarQube integration.
- Worked in a Git-based Agile workflow with pull requests, reviews, and feature branching.

PROJECTS

- **Full-Stack Developer – Acara (Event Booking Application)**
 - Built a full-stack event booking platform with intelligent discovery and personalized user experience.
 - Developed frontend using Flutter with structured UI components and scalable navigation flows.
 - Engineered backend using Supabase (PostgreSQL, authentication, REST APIs, real-time capabilities).
 - Designed relational database schema for users, events, interests, bookmarks, and bookings.
 - Implemented automatic location detection with manual override and dynamic event filtering.
 - Integrated AI-powered chatbot assistant for conversational event discovery and contextual user support.
- **Full-Stack Developer – RentNGo Web Application**
 - Developed a rental management web app with dedicated frontend and backend modules.
 - Integrated APIs, handled database operations, and used GitHub for version control.
 - Designed project structure with deployment readiness and smooth frontend-backend communication.

TECHNICAL SKILLS

• Backend

- PostgreSQL
- REST APIs
- Supabase
- JWT Authentication
- Edge Functions
- CRUD Operations
- SQL / SQL Server

• State Management & Routing

- Riverpod
- React Context API
- GoRouter
- React Router DOM

• Software Engineering

- SDLC, requirements analysis, SRS writing
- Class diagrams, UML, architecture fundamentals

• UI/UX & Design

- Figma: wireframing, prototyping
- Responsive Design
- Glassmorphism UI
- Framer Motion
- Flutter Animations
- Rich Text Editors
- Theme Systems

• Tools

- Git & GitHub
- Postman
- Docker
- SonarQube
- Android Emulator
- Supabase CLI

• AI & ML

- KNN, Naive Bayes, data preprocessing concepts

• Professional Skills

- Documentation,
- presentations,
- teamwork,
- problem solving,
- self-learning

• Testing & Quality

- Jest
- React Testing Library
- Supertest

PROJECTS

• CPU Scheduling Simulator

- Tech: C++, OOP, Data Structures & Algorithms
- Implemented CPU scheduling algorithms including FCFS, SJF, SRTF, Round Robin, and Priority Scheduling.
- Simulated process execution, waiting time, turnaround time, and scheduling behavior using object-oriented programming concepts.
- Strengthened understanding of operating systems concepts, algorithm analysis, and process management.

• Linked List & Bank Management Systems

- Tech: C++, OOP, File Handling, DSA
- Developed menu-driven C++ applications implementing linked lists, file handling, searching, sorting, and transaction management.
- Built employee and banking management systems using object-oriented programming principles and dynamic data structures.
- Implemented advanced linked list operations including palindrome checks, middle-node retrieval, insertion, deletion, and sorting.

• DevDaily Dashboard – React Application

- Developed a developer productivity dashboard using React and Hooks.
- Architected reusable, component-based UI for scalability and maintainability.
- Integrated external APIs and handled asynchronous data with proper state control.
- Improved performance by optimizing renders and reducing unnecessary re-renders.
- Focused on clean code structure and modular design principles.

• HCI Prototype Designer – Figma

- Created UI prototypes and requirement documents for a restaurant robot system.
- Developed user flows and interface logic using HCI principles.

• Additional Academic Projects

- WordPress Website Development
- SQL Database Design & CRUD Interfaces
- LED Obstacle Detection Cap (Assistive Technology Concept)
- Piezoelectric Energy Harvesting Tiles (smart flooring)
